REST, auth/roles,
jobs/queues

CMS
WordPress, theme
customization, plugins,
WooCommerce

Database
MySQL/MariaDB, migrations,
reporting, optimization

Ops
Git, Composer, NPM,
deployment support,
logging

Full-stack developer specializing
in enterprise logistics and
container management systems.
Builds robust Laravel
applications that integrate with
external APIs, process complex
data workflows, and automate
business operations.

Experienced in multi-provider
integrations, OCR workflows
(Google Cloud Vision), real-time
notifications, activity logging,
and PDF/Excel generation.

EXPERIENCE

Full-stack Developer [YEAR–YEAR]
[CLIENT / COMPANY NAME]

- Built and maintained Laravel-based business systems with complex workflows, role-based access, and audit-friendly activity logging.
- Implemented third-party API integrations to automate operations (accounting, notifications, and external provider flows).
- Designed MySQL schemas and optimized queries for performance, reporting, and reliability.

Software Developer [YEAR–YEAR]
[CLIENT / COMPANY NAME]

- Delivered admin dashboards with DataTables reporting, import/export tooling (PDF/Excel), and secure RESTful endpoints.
- Collaborated with operations teams to translate logistics processes into reliable software features.

Copy/paste an experience block to add more roles.

SELECTED PROJECTS

Premium Direct [YEAR–YEAR]
Container Booking System
Enterprise logistics platform for container booking, tracking, and automated notifications with multi-provider integration (OOCL, ANL, MSC, MAERSK, COSCO).

PRA Insights [YEAR–YEAR]
Container Inspection System
Inspection platform with OCR seal extraction, image processing, client reporting with click tracking, and Google Cloud Vision API integration for automated data capture.
